Summary

Frontend Software Engineer with nearly 3+ **years of experience** architecting **React, Next.js, and TypeScript** applications, with a focus on reusable **component design** and scalable frontend architecture. Delivers **responsive, performance-optimized** client-facing SaaS products **contributing to \$1M+ in platform revenue**, integrating **GraphQL and REST APIs** end-to-end, with a strong track record of shipping polished, user-centric solutions in fast-paced environments.

Skills

- **Core:** ReactJS / React.js | React Hooks | Next.js | TypeScript | JavaScript (ES6+) | HTML5 | CSS3 | SASS/SCSS | TailwindCSS | Material UI
- **State & Testing:** Redux | Context API | Jest | React Testing Library (RTL)
- **APIs & Data:** GraphQL | REST APIs
- **Tooling & Cloud:** Vite | Webpack | Babel | NPM | Yarn | CI/CD | Git | GitHub | Azure | AWS | Figma
- **Concepts:** Data Structures & Algorithms | Frontend Architecture | Micro Frontend | Responsive Web Design | Asynchronous Request Handling | Performance Optimization

Experience

Software Engineer Codewave, Bengaluru **07/2023 - Present**

- Built a modular, **monorepo CRM platform** with **9+ packages** (core components, CRM modules, providers, user settings, pageshell package, etc.) using **React 19+**, **TypeScript**, and **Vite**, with a **micro-frontend architecture**.
- Integrated **Puck page builder** for **drag-and-drop page creation** and built a **real-time service ticket and document management system** with visual process definition and dynamic rendering, enabling **non-technical users** to create custom experiences and **automate business processes**.
- Built **real-time CRM features** (Leads, Deals, Contacts, Accounts) integrating optimized **GraphQL queries and mutations**, cutting data retrieval latency by **35%** and improving team response efficiency.
- Leveraged **AI-powered developer tools** (Cursor, ChatGPT, Gemini) to **accelerate feature development**, refactor legacy components, expand automated test coverage, and eliminate repetitive manual coding tasks.
- Led **client-facing frontend delivery** of a wellness professional platform, translating business goals into high-fidelity interactive pages — Homepage, Plans, About, and Blogs — powered by **GSAP animations**, improving user engagement by **60%**.
- Architected the **Knowledge Hub search experience** and My Notes workspace with dynamic React data grids, faceted filters, and full REST API integration, reducing content search time by **45%** across the student user base.
- Tested dynamic forms, validation components, and authentication routes using Jest and **React Testing Library (RTL)** under **Test-Driven Development (TDD)** guidelines, catching regressions pre-release and cutting manual QA cycles.
- Developed **responsive UI components**, Swiper carousels, and interactive service filter flows, debugging complex multi-form registration states to deliver a more stable checkout and sign-up experience across key user journeys.

Frontend Development Intern CodeCraft, Mangaluru **09/2022 – 02/2023**

- Built a foundation in production frontend development through an intensive program covering **HTML, CSS, and JavaScript**, developing responsive landing pages and reusable UI utilities that carried directly into later **React and TypeScript** work at Codewave.
- Paired technical training with professional-development and soft-skills coursework, building the collaboration and communication habits now applied in day-to-day cross-functional delivery.

Professional Training

Technical Course Kodnest, Bengaluru **02/2023 – 06/2023**

- Built foundational depth in **Data Structures & Algorithms** and core software engineering principles immediately before joining Codewave, directly enabling a smooth transition into production-level development.

Education

Bachelor of Engineering **07/2018 - 08/2022**
Computer Science **KVG College of Engineering**
